

Hi, I am here to assist you regarding our Policies and work culture

Query

what should I do in case of planned Hospitalization?

Ask question

Re-written query is : procedures for planned hospitalization

Hypothetical answer: Procedures for planned hospitalization typically include: obtaining a physician's referral or admission order, verifying insurance coverage and pre-authorization, scheduling the admission date, completing pre-admission paperwork, undergoing required preoperative tests (e.g., blood work, imaging), preparing personal identification and insurance documents, and following pre-admission instructions (e.g., fasting, medication adjustments). On the day of admission, patients should arrive at the designated time, check in at the admissions desk, and provide necessary documentation. Hospital staff will review the treatment plan, obtain informed consent, and assign a room.

LLM response is : For planned hospitalization, employees should request pre-authorization as per the network rules.
